Remote theme demo

Using Classmethod's published **classmethod** theme via a direct URL.

Why use a remote theme?

- Prototype quickly without copying theme files

- Reuse styles hosted elsewhere

- Mix remote themes with local ones in the same deck

Tips

1. Set the `theme` front matter to the CSS URL.

2. Keep a fallback plan in case the remote resource disappears.

3. Pin the URL to a specific commit for reproducibility.

Resources

- Classmethod theme source
- Marp themes documentation

Happy presenting!
